COVID-19 SALIVA TESTING

10 step process: sample collection

## 10 step process for sample collection using mobile app

1 Sanitise or wash + dry hands.

2 Select a tube and a plastic biohazard bag.

3 Open the Covid-19 Saliva Testing App.

4 Scan barcode on tube.

5 Remove lid from tube. Begin to form saliva in your mouth and allow it to dribble into the tube.

6 Keep dribbling until your saliva reaches the label (at least 1ml).

7 Tightly screw lid back onto tube and re-scan the barcode on tube.

8 Great – nearly done! Put tube of saliva into plastic biohazard bag and seal bag.

9 Take bag with tube in it to the drop off point. Scan the 2D barcode on the drop off container and deposit your sample.

10 Sanitise again. That's it – thank you!

You will get your results via text message.
